U.S. Patent and Trademark Office PTOL-303 (Rev. 7-05) Continuation of 11. does NOT place the application in condition for allowance because:

Regarding at least claims 1, 37, and 41, applicant argues that Burke et al. does not disclose, teach, or suggest a source controller for triggering one or more emitters. The examiner disagrees. The electron beam moving means (col. 3, lines 1-8) of Burke et al. has been interpreted as a source controller used to cause the electron emission.

Furthermore, the control of emitters to generate X-rays of two different energies (col. 3, lines 47-52) in Burke et al. reads on "triggering of emitters", since a necessary controller causes the emitters to initiate the emission of one of at least two selectable different energies, thus "triggering" the emission at a selected energy.

In addition, applicant states with regards to Burke et al. that "... it appears that a cathode structure is used to trigger the emitters ...."

Therefore, applicant admits that Burke et al. appears to teach triggering one or more emitters, since this "cathode structure" is part of a source controller.

In conclusion, applicant's arguments are not persuasive, and the claims remain rejected.
